

## OMNi Telix

### Secure received messages with HTML Sanitizer

Telix security is galvanized after 30+ years of operation and thousands of users.

OMNi is adding up to the secure environment of Telix with the embedded HTML Sanitizer. Email messages are usually received from third-parties and untrusted sources. The embedded sanitizer provides a robust first line of defense and produces HTML that is safe for your OMNi web application. We employ the sanitizer and knowledge of the Open Worldwide Application Security Project. OWASP is an online community that produces articles, methodologies, documentation, tools, and technologies in the field of web application security.

HTML sanitizer

☒ On ☐ Off

To enable the HTML sanitizer, go to **Tools | Viewer** and enable this feature. Fast and easy!

Other Omni Telix security features include:

- SSL/TLS Certificate (also referred to as a “digital certificate”)
- Two-factor authentication (also known as 2FA)
- Omni Visibility (Public, master password, Private)
- Password policies
- Demilitarize zone setup (known as DMZ)
- Security code proprietary to Telix system and applications
- The ability to mix and match whatever best suites your business environment.

You may contact [support@lgmar.gr](mailto:support@lgmar.gr) to assist you on how to manage a secure email system that makes sense to users and is based on the best practices.
